Dear Esteemed Customer,

RELOCATION OF PREPAID ENERGY METERS TO ELECTRICITY POLES OR HIGH WALLS

We hope this letter finds you in good health and high spirit.

We write to inform you of Kogi Electricity Distribution Limited (KEDL)'s intention to relocate prepaid energy meters currently installed within residential and commercial premises to external electric poles or high walls of the respective properties.

This decision follows a review which revealed that the current meter installations at several locations, including your premises, do not comply with industry standards and best practices. Additionally, the present positioning of the meters limits our personnel's ability to conduct routine inspections.

To ensure enhanced safety, accessibility, and operational efficiency, your meter will be relocated to a position that allows KEDL personnel easy access for commissioning, testing inspection, reading, and maintenance, with minimal inconvenience to you.

Our team of metering engineers and linemen are scheduled to visit your premises from 15th January, 2026 to carry out this relocation. We kindly seek your cooperation and support during this exercise.

Thank you for understanding.

Yours faithfully,

For: KOGI ELECTRICITY DISTRIBUTION LIMITED
